

## DEPARTMENT OF PHYSICS

### Experiential Learning

#### ➤ Performing Experiments

Understanding the concepts of physics becomes better by doing rather than reading or remembering. Therefore, performing an experiment in the laboratory to verify certain facts has an integral part of physics curriculum. Students used to perform the experiments in the laboratory thereby fascinating experiential learning.

#### ➤ Making scientific posters

Experiential learning was also reflected in the form of creative posters made by students on the occasion of National Science Day celebrated on 28<sup>th</sup> February 2023.

# Participative Learning

## ➤ Group Discussion

Physics department conducted group discussion for B.Sc. 6S students on 14/4/2023. Total 75 students participated in group discussion. Topics for discussion were given well in advance. Group discussion enhances communication, promotes involvement of the students, boosts their confidence and helps in gaining depth of knowledge.

## ➤ Poster Presentation

Participative learning helps in the empowerment of students by allowing them to participate in the learning process. This year physics department conducted Poster Presentation Competition on 28/2/2023 and 23 students from the department were participated in the competition.
